

Comments to tables 1.4

Sectors' shares in industrial output represent % of total production measured in international prices.

These tables are the spin-offs of the calculation of monthly industrial output in constant dollar terms by the UEPLAC. The 249 products of the database have been grouped along traditional Ukrainian branches: power (2 products), fuels (11 products, of which 8 for oil and gas and 3 for coal), steel (10 products), machine building (92 products), food (42 products), and other (92 products). "Other" comprises *i. a.* chemicals, wood and paper, construction materials, and light industry.
